

Laughing Ladybirds Science

Khian has been carrying out lots of colour experiments and following the instructions. Here he has made a rainbow using coloured water and kitchen towel. First, Khan put some water in 6 cups. Then he added some different coloured food colouring to 3 of the cups, making the water change colour and leaving plain water in between coloured water. Next, he folded up a sheet of Kitchen towel and placed 1 end in the cup with water and the other end in the one empty cup. He did this with more pieces of kitchen towel. Finally, he waited and watched as the towel began to soak up the coloured water and spread along the row, making this beautiful rainbow.

Khian said - "We got 6 cups with red, blue and yellow food colouring we put the paper towels like the rainbow"
