

Prapti Neupane RBB

Here is a science experiment from one of our reception RBB children

You can really make your drawings float using this fun experiment. Prapti tried the float a marker man experiment. Using a plate,water and a dry erase marker Prapti drew a stick man then placed some water ontop of her drawing to see if it would float. The drawing should float due to the oily silicone polymer in the dry-erase marker preventing it from sticking.
