

1)

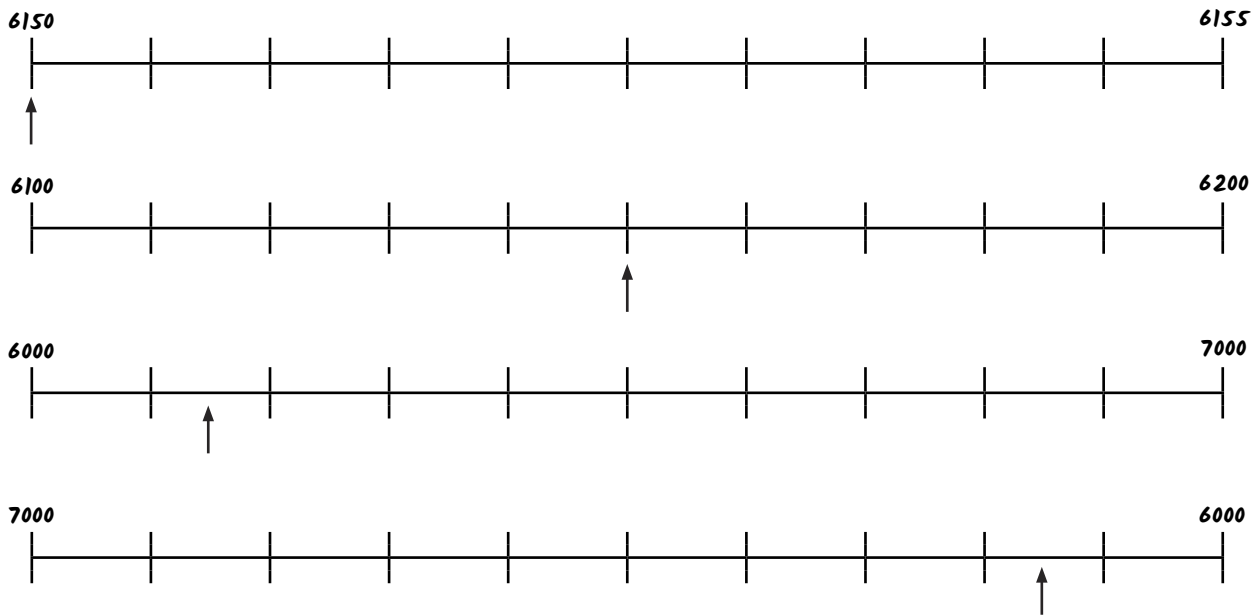

Similarities	Differences
Accept any correct similarities, such as the arrow is pointing to 2000 on all the number lines.	Accept any correct differences, such as the intervals increase in steps of 2000 on line C but in 1000 on lines A and B.

2) Accept an explanation that shows that any of these answers could be correct because there is no value at the start of the number line. This means the value of the intervals could be anything. For Lucas to be correct, the intervals would represent 1. For Shona to be correct, the intervals would represent 1000. For Muhammed to be correct, the intervals would be worth 100 and would be decreasing in size.

1) a) *Accept any number lines, such as:*

b) *Accept any explanation that shows that if the intervals are consistent, the start and end numbers could be anything.*

2) *Accept any correct number line, such as: 9950*
