Focus on… Computing

#115

On this day in…

2005, The Airbus A380, the world's largest commercial jet and nicknamed the 'Superjumbo', was unveiled at a ceremony in Toulouse, France. It is equipped with 100,000 different wires, totalling 530 kilometres, or 330 miles, in length, that perform 1,150 separate functions!

Did you know…

IBM's Summit is the world's most powerful computer. It occupies the equivalent of two basketball courts and achieves an impressive 148.6 petaflops thanks to its 2.41 million cores.
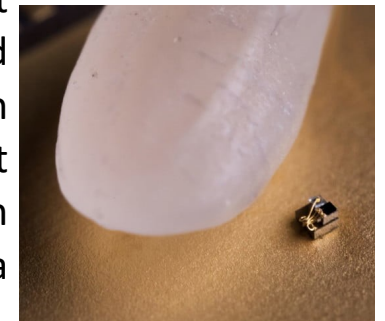

Go explore…

Now we are leaning remotely, why not create a video to help other students. Maybe make a video on 'how to edit and save PDF files' or you could produce a clip on 'how to submit/ turn in your work to an assignment'.

Picture this…

The world's smallest computer was designed to be a precision temperature sensor. It measures just 2x2x4mm which is smaller than a grain of rice.
