

# Focus on... Science

#207

On this day...

In 1994, the first near-complete fossil of a pygmy mammoth skeleton was found in rapidly eroding sea cliffs on Santa Rosa Island, one of the Channel Islands of California.

Did you know...

Snakes' eyes are closed all the time. Unlike other animals' eyelids, snakes' spectacles are transparent, like a window in their skin, allowing them to see out through their always-closed eyelids.

Go explore...

What is the name of the closest star to earth?

Picture this...

How can we test Martian soil to look for signs of life?
